Senior iOS Tech Lead with **12+ years** architecting and shipping **SwiftUI** apps used by **millions** across the MENA region. I lead iOS teams and set technical direction — with proven architectural range: recently I built a production-grade ride-hailing platform **solo, end-to-end** (native iOS & Android clients, a hardened NestJS / PostgreSQL / Redis backend, and a Next.js ops console).

Mar 2026 — Present	Full-Stack Platform Architect — iOS · Android · Backend · Web
CURRENT	Ride-Hailing Platform · Independent Project

Architected and shipped a production ride-hailing platform **solo** — two native **iOS/SwiftUI** apps (Rider & Driver) plus their Android counterparts, a hardened backend, and a real-time ops console — **owning every layer** from data model to release, and setting the engineering standards: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite.

Backend APIs	Modular monolith, ~17 domains — trip state machine , scored dispatch over a Redis geo index, double-entry ledger , realtime rider/driver/admin sockets , JWT + phone-OTP, idempotency & audit log · 1,150+ tests , Swagger docs.
Admin Console	Bespoke 19-screen ops surface — live MapLibre trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map zone editor , Google SSO .
iOS Apps · Rider & Driver	Two native SwiftUI apps — live GPS trip lifecycle , realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.
Android Apps · Rider & Driver	Native Kotlin / Compose parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across one shared API contract .

One backend · one contract · four clients — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs, shipped end-to-end.
