I build the first version myself. Right now I'm architecting and building a production ride-hailing platform **solo, across four layers** — a hardened NestJS / PostgreSQL / Redis backend and a Next.js operations console already in production, with native iOS and Android clients in active development. Empty repo to running system: data model, dispatch, ledger, realtime sockets, CI, release. Before that I spent **12+ years** in iOS and **seven of them leading** the team behind a POS platform used by 20k+ restaurants — so I know what it costs to hand a codebase to other engineers, and I build for that from day one.

12+ YEARS IN ENGINEERING	4 PLATFORM LAYERS OWNED SOLO	1,150+ TESTS ON THE BACKEND I WROTE	20k+ BUSINESSES SERVED BY THE POS I LED
--------------------------------	------------------------------------	---	---

§ 01 Zero to One

01 — SHIP FROM NOTHING Empty repo to running system I take the first version all the way myself — data model, API contract, auth, the deploy. On the current platform that meant a trip state machine , scored dispatch over a Redis geo index, a double-entry ledger , realtime sockets and 1,150+ tests , before anyone else touched the code.	02 — STACK DECISIONS Choose the bets, own the consequences Nobody to escalate to when you are the whole engineering team. I pick the stack, set the module boundaries and the security posture, and live with the results — then keep the codebase current as it grows, the way I moved a seven-year-old production POS onto SwiftUI without pausing delivery.
--	--

03 — STANDARDS BEFORE SCALE Build it so a team can take it over Idempotent mutations, acyclic module boundaries, a CI suite that gates the merge, Swagger docs — written while I was still the only engineer. That is the difference between a prototype and something you can hire into .	04 — THEN LEAD THE TEAM I have done the other half too Seven years leading a 5+ engineer iOS team — onboarding, mentoring, review culture, CI/CD, a 99.8-99.9% crash-free rate in production. I know what founding code has to look like by the time the second engineer arrives, because I have been on the receiving end of it.
---	---

§ 02 Professional Experience

Mar 2026 — Present CURRENT INDEPENDENT	Founding Platform Architect — iOS · Android · Backend · Web Ride-Hailing Platform · Independent Project Took the full technical scope of a founding CTO and carried it alone: chose the stack, set the standards, and have been building a production ride-hailing platform — a hardened backend and a real-time ops console in production , with two native iOS/SwiftUI apps (Rider & Driver) and their Android counterparts in active development. Every layer from data model to release, governed by explicit rules: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite that gates the merge. Backend APIs NestJS · TypeScript · Mar '26 → now Admin Console Next.js 14 · Jun '26 → now iOS Apps · Rider & Driver SwiftUI · Jul '26 → now Android Apps · Rider & Driver Kotlin · Jetpack Compose · Sep '26 → now One backend · one contract · four clients in flight — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs. The exercise a technical leader needs periodically: own every trade-off yourself, then know exactly what you are asking of a team.	Modular monolith, ~17 domains — trip state machine, scored dispatch over a Redis geo index, double-entry ledger , realtime rider/driver/admin sockets , JWT + phone-OTP, idempotency & audit log · 1,150+ tests , Swagger docs. Bespoke 19-screen ops surface — live MapLibre trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map zone editor , Google SSO . Two native SwiftUI apps — live GPS trip lifecycle , realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation. Native Kotlin / Compose parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across one shared API contract .
---	--	--

Aug 2019 — Aug 2026 RIYADH, KSA	iOS Team Lead — 7 years leading the iOS org Marn — Jahez Group ▸ — Led a 5+ engineer iOS team for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by 20k+ restaurants and cafés. — Owned the technical roadmap and architecture : an offline-first CoreData core with cloud sync, built so a venue keeps trading when the network does not. — Set the engineering standards — module boundaries, code review, automated testing — that held the app at a 99.8-99.9% crash-free rate in production. — Drove the multi-year migration to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to product leadership. — Built CI/CD and the release process from scratch , cutting deployment time 60% and shortening every engineer's feedback loop. — Ran the performance programme (40% faster load times) and designed the table-management, order-processing and inventory systems at the heart of the product. — Partnered with product, design and backend leadership on scope, estimates and delivery commitments the team could keep.
------------------------------------	--

Dec 2025 — Jun 2026 VOLUNTEER	Senior iOS Engineer HaramBlur ▸ · Voluntary Charity Project — Designed an architecture integrating on-device machine learning for real-time content analysis. — Built a seamless communication layer between native iOS and web-based content. — Implemented efficient image processing with region-based and full-image blur effects. — Created a real-time video monitoring system for continuous content filtering. — Developed smart banner blocking and optimised memory management throughout.
----------------------------------	--

Mar 2018 — May 2019 RIYADH, KSA	iOS Team Lead Ego — The Ride Hailing App ▸ — Led iOS delivery for a complete ride-hailing ecosystem (rider, driver, watchOS) serving 15M+ users in Saudi Arabia. — Implemented real-time GPS tracking and navigation with MapKit and optimised route algorithms. — Integrated Apple Pay, HyperPay, and push-notification infrastructure. — Created seamless iPhone — Apple Watch handoff for continuous ride tracking. — Built the driver rating system and real-time fare calculation engine.
------------------------------------	--

Sep 2016 — Mar 2018 KSA	Senior iOS Engineer HungerStation — DeliveryHero Group ▸ — Contributed to a major food-delivery platform serving 20M+ users. — Optimised app performance for high-volume transaction processing. — Implemented real-time order tracking and delivery optimisation. — Collaborated with backend teams on API design and integration.
----------------------------	--

May 2016 — Aug 2016	iOS Developer ALNapedh ▸ — Developed food-ordering apps with Firebase integration and real-time features. — Implemented Speedrely payments and live-chat functionality. — Built responsive UI with Auto Layout across multiple device sizes.
---------------------	--

Jul 2015 — Sep 2015	iOS & Apple Watch Developer Nile Design Co. ▸ — Early adopter of Apple Watch development (watchOS 1-2). — Built a foundation in iOS and watchOS app development. — Adopted SwiftUI from WWDC 2019 onward.
---------------------	---

May 2014 — May 2015	iOS Developer UK Pro. Solutions Ltd. ▸ — Foundation iOS experience in Objective-C and early Swift. — Built social networks and e-commerce platforms. — Learned core iOS principles and App Store deployment.
---------------------	--

§ 03 Selected Projects

01 — FULL-STACK Ride-Hailing Platform (built from scratch · since Mar 2026) SwiftUI · Kotlin · Jetpack Compose · NestJS · TypeScript · PostgreSQL · Redis · Socket.IO · Next.js End-to-end ride-hailing platform architected solo: a hardened NestJS backend (trip state machine, scored dispatch, double-entry ledger, realtime sockets, 1,150+ tests) and a real-time Next.js operations console in production , with four native clients (Rider & Driver on iOS/SwiftUI and Android/Kotlin-Compose) in active development. ♦ Four Platforms · Solo Ownership · Production Security	02 — ENTERPRISE Marn — iPad POS SwiftUI · CoreData · CloudKit · Real-time Sync Enterprise point-of-sale serving 20k+ restaurants and cafés across Saudi Arabia. Offline-first architecture, complex table management, real-time order processing — the product my iOS team owned for seven years . ★ 4.8 / 5 — 2,437 ratings
03 — MOBILITY Ego — Ride Hailing MapKit · Core Location · Apple Pay · Push · watchOS Complete ride-hailing ecosystem: rider app, driver app, and Apple Watch companion. Real-time GPS, Apple Pay, and cross-device experiences for 15M+ users. ★ 4.7 / 5 — 211.8k+ ratings	04 — DELIVERY HungerStation UIKit · Firebase · Real-time APIs · Perf Optimization Major food-delivery platform serving 20M+ users across Saudi Arabia and Bahrain. Focused on performance and real-time order tracking. ★ 4.5 / 5 — 1.9M+ ratings
05 — AI / PRIVACY Haram Blur — Privacy Browser SwiftUI · CoreML · WKWebView · CoreImage · Vision Privacy-focused iOS browser with real-time, AI-powered content detection and filtering. On-device ML, smart blur effects, and live video monitoring. ♦ AI-Powered Privacy Browser	06 — COMMUNITY Daleelo MapKit · Core Location · Social SDKs · Community Muslim community app for users across the US — prayer times, mosque finder, and community features with enhanced location and social integration. ★ 4.5 / 5 — 1,287 ratings

§ 07 Honours

01	Led an iOS engineering team for 7 consecutive years on a POS platform serving 20k+ restaurants and cafés — through the product's growth from launch scale to enterprise.
02	Held a 99.8-99.9% crash-free rate and cut deployment time 60% by building the standards, tests and CI/CD the team ran on.
03	Architecting a full-stack ride-hailing platform solo — NestJS/PostgreSQL backend and Next.js ops console in production, four native clients (iOS + Android) in development, with idempotent APIs and double-entry accounting.
04	Built a food-delivery platform serving 20M+ users across Saudi Arabia and Bahrain, and a ride-hailing ecosystem serving 15M+ users in Saudi Arabia.
05	10+ apps published on the App Store, used by millions across MENA.
06	30+ projects delivered across a 12-year career.
07	Early Swift adopter (WWDC 2014) and early SwiftUI adopter (WWDC 2019) — a habit of betting on the right platform shift early.
