● SEE THE LIVE INTERACTIVE EDITION ↗

I build the first version myself. Right now I'm architecting and building a production ride-hailing platform **solo, across four layers** — a hardened NestJS / PostgreSQL / Redis backend and a Next.js operations console already in production, with native iOS and Android clients in active development. Empty repo to running system: data model, dispatch, ledger, realtime sockets, CI, release. Before that I spent **12+ years** in iOS and **seven of them leading** the team behind a POS platform used by 20k+ restaurants — so I know what it costs to hand a codebase to other engineers, and I build for that from day one.

12+	YEARS IN ENGINEERING
4	PLATFORM LAYERS OWNED SOLO
1,150+	TESTS ON THE BACKEND I WROTE
20k+	BUSINESSES SERVED BY THE POS I LED

§ 01 Zero to One

01 — SHIP FROM NOTHING

Empty repo to running system

I take the first version all the way myself — data model, API contract, auth, the deploy. On the current platform that meant a **trip state machine**, **scored dispatch** over a Redis geo index, a **double-entry ledger**, realtime sockets and **1,150+ tests**, before anyone else touched the code.

02 — STACK DECISIONS

Choose the bets, own the consequences

Nobody to escalate to when you are the whole engineering team. I pick the stack, set the module boundaries and the security posture, and live with the results — then keep the codebase current as it grows, the way I moved a seven-year-old production POS onto SwiftUI without pausing delivery.

03 — STANDARDS BEFORE SCALE

Build it so a team can take it over

Idempotent mutations, acyclic module boundaries, a CI suite that gates the merge, Swagger docs — written while I was still the only engineer. That is the difference between a prototype and something you can **hire into**.

04 — THEN LEAD THE TEAM

I have done the other half too

Seven years leading a **5+ engineer iOS team** — onboarding, mentoring, review culture, CI/CD, a **99.8–99.9% crash-free** rate in production. I know what founding code has to look like by the time the second engineer arrives, because I have been on the receiving end of it.

§ 02 Professional Experience

Mar 2026 — Present
CURRENT
INDEPENDENT

Founding Platform Architect — iOS · Android · Backend · Web

Ride-Hailing Platform · Independent Project

Took the **full technical scope of a founding CTO** and carried it alone: chose the stack, set the standards, and have been building a production ride-hailing platform — a hardened backend and a real-time ops console **in production**, with two native **iOS/SwiftUI** apps (Rider & Driver) and their Android counterparts in active development. Every layer from data model to release, governed by explicit rules: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite that gates the merge.

Backend APIs NestJS · TypeScript · Mar '26 → now	Modular monolith, ~17 domains — **trip state machine**, **scored dispatch** over a Redis geo index, **double-entry ledger**, realtime rider/driver/admin **sockets**, JWT + phone-OTP, idempotency & audit log · **1,150+ tests**, Swagger docs.
Admin Console Next.js 14 · Jun '26 → now	Bespoke **19-screen** ops surface — live **MapLibre** trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map **zone editor**, **Google SSO**.
iOS Apps · Rider & Driver SwiftUI · Jul '26 → now	Two native **SwiftUI** apps — live GPS **trip lifecycle**, realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.
Android Apps · Rider & Driver Kotlin · Jetpack Compose · Sep '26 → now	Native **Kotlin / Compose** parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across **one shared API contract**.

One backend · one contract · four clients in flight — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs. The exercise a technical leader needs periodically: own every trade-off yourself, then know exactly what you are asking of a team.

Aug 2019 — Aug 2026
RIYADH, KSA

iOS Team Lead — 7 years leading the iOS org

Marn — Jahez Group ↗

- **Led a 5+ engineer iOS team** for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by 20k+ restaurants and cafés.
- **Owned the technical roadmap and architecture:** an offline-first CoreData core with cloud sync, built so a venue keeps trading when the network does not.
- **Set the engineering standards** — module boundaries, code review, automated testing — that held the app at a 99.8–99.9% crash-free rate in production.
- **Drove the multi-year migration** to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to product leadership.
- **Built CI/CD and the release process from scratch**, cutting deployment time 60% and shortening every engineer's feedback loop.
- Ran the performance programme (40% faster load times) and designed the table-management, order-processing and inventory systems at the heart of the product.
- Partnered with product, design and backend leadership on scope, estimates and delivery commitments the team could keep.

Dec 2025 — Jun 2026
VOLUNTEER

Senior iOS Engineer

HaramBlur ↗ · Voluntary Charity Project

- Designed an architecture integrating on-device machine learning for real-time content analysis.
- Built a seamless communication layer between native iOS and web-based content.
- Implemented efficient image processing with region-based and full-image blur effects.
- Created a real-time video monitoring system for continuous content filtering.
- Developed smart banner blocking and optimised memory management throughout.

Mar 2018 — May 2019
RIYADH, KSA

iOS Team Lead

Ego — The Ride Hailing App ↗

- Led iOS delivery for a complete ride-hailing ecosystem (rider, driver, watchOS) serving 15M+ users in Saudi Arabia.
- Implemented real-time GPS tracking and navigation with MapKit and optimised route algorithms.
- Integrated Apple Pay, HyperPay, and push-notification infrastructure.
- Created seamless iPhone ⟷ Apple Watch handoff for continuous ride tracking.
- Built the driver rating system and real-time fare calculation engine.

Sep 2016 — Mar 2018
KSA

Senior iOS Engineer

HungerStation — DeliveryHero Group ↗

- Contributed to a major food-delivery platform serving 20M+ users.
- Optimised app performance for high-volume transaction processing.
- Implemented real-time order tracking and delivery optimisation.
- Collaborated with backend teams on API design and integration.

May 2016 — Aug 2016

iOS Developer

ALNapedh ↗

- Developed food-ordering apps with Firebase integration and real-time features.
- Implemented Spreedly payments and live-chat functionality.
- Built responsive UI with Auto Layout across multiple device sizes.

Jul 2015 — Sep 2015

iOS & Apple Watch Developer

Nile Design Co. ↗

- Early adopter of Apple Watch development (watchOS 1–2).
- Built a foundation in iOS and watchOS app development.
- Adopted SwiftUI from WWDC 2019 onward.

May 2014 — May 2015

iOS Developer

UK Pro. Solutions Ltd. ↗

- Foundation iOS experience in Objective-C and early Swift.
- Built social networks and e-commerce platforms.
- Learned core iOS principles and App Store deployment.

§ 03 Selected Projects

01 — FULL-STACK

Ride-Hailing Platform (built from scratch · since Mar 2026)

SwiftUI · Kotlin · Jetpack Compose · NestJS · TypeScript · PostgreSQL · Redis · Socket.IO · Next.js

End-to-end ride-hailing platform architected solo: a hardened NestJS backend (trip state machine, scored dispatch, double-entry ledger, realtime sockets, 1,150+ tests) and a real-time Next.js operations console **in production**, with **four native clients** (Rider & Driver on iOS/SwiftUI and Android/Kotlin·Compose) in active development.

◆ Four Platforms · Solo Ownership · Production Security

02 — ENTERPRISE

Marn — iPad POS

SwiftUI · CoreData · CloudKit · Real-time Sync

Enterprise point-of-sale serving 20k+ restaurants and cafés across Saudi Arabia. Offline-first architecture, complex table management, real-time order processing — **the product my iOS team owned for seven years**.

★ 4.8 / 5 — 2,437 ratings

03 — MOBILITY

Ego — Ride Hailing

MapKit · Core Location · Apple Pay · Push · watchOS

Complete ride-hailing ecosystem: rider app, driver app, and Apple Watch companion. Real-time GPS, Apple Pay, and cross-device experiences for 15M+ users.

★ 4.7 / 5 — 211.8k+ ratings

04 — DELIVERY

HungerStation

UIKit · Firebase · Real-time APIs · Perf Optimization

Major food-delivery platform serving 20M+ users across Saudi Arabia and Bahrain. Focused on performance and real-time order tracking.

★ 4.5 / 5 — 1.9M+ ratings

05 — AI / PRIVACY

HaramBlur — Privacy Browser

SwiftUI · CoreML · WKWebView · CoreImage · Vision

Privacy-focused iOS browser with real-time, AI-powered content detection and filtering. On-device ML, smart blur effects, and live video monitoring.

◆ AI-Powered Privacy Browser

06 — COMMUNITY

Daleelo

MapKit · Core Location · Social SDKs · Community

Muslim community app for users across the US — prayer times, mosque finder, and community features with enhanced location and social integration.

★ 4.5 / 5 — 1,287 ratings

§ 04 Stack & Craft

ENGINEERING LEADERSHIP — ORG

- Team Leadership
- Technical Direction
- Architecture Governance
- Technical Roadmap
- Mentoring & Career Growth
- Onboarding
- Code Review Culture
- Estimation & Planning
- Cross-functional Partnership
- Quality & Crash Budgets
- Release Management
- Agile / Scrum

IOS — 2025 — CORE

- Swift 6.0
- SwiftUI
- UIKit
- Combine
- async/await
- SwiftData
- iOS 18+

ANDROID — 2025 — NATIVE

- Kotlin
- Jetpack Compose
- Coroutines
- Flow
- MVVM

§ 07 Honours

01 Led an iOS engineering team for **7 consecutive years** on a POS platform serving **20k+ restaurants** and cafés — through the product's growth from launch scale to enterprise.

02 Held a **99.8–99.9% crash-free rate** and cut deployment time **60%** by building the standards, tests and CI/CD the team ran on.

03 Architecting a **full-stack ride-hailing platform solo** — NestJS/PostgreSQL backend and Next.js ops console in production, four native clients (iOS + Android) in development, with idempotent APIs and double-entry accounting.

04 Built a food-delivery platform serving **20M+ users** across Saudi Arabia and Bahrain, and a ride-hailing ecosystem serving **15M+ users** in Saudi Arabia.

05 **10+ apps** published on the App Store, used by millions across MENA.

06 **30+ projects** delivered across a 12-year career.

07 Early Swift adopter (WWDC 2014) and early SwiftUI adopter (WWDC 2019) — a habit of betting on the right platform shift early.
