Full-Stack Platform Architect – iOS · Android · Backend · Web @

Ride-Hailing Platform · Independent

Mar 2026 → Present

CURRENT

Architected and have been building a production ride-hailing platform solo – a hardened backend and a real-time ops console in production, with two native iOS/SwiftUI apps (Rider & Driver) and the Android driver app in active development – owning every layer and setting the engineering standards (idempotency, double-entry accounting, acyclic module boundaries, CI test suite).

Backend APIs

// NestJS · TypeScript · Mar '26 → now

Modular monolith, 22 domains – trip state machine, scored dispatch over a Redis geo index, double-entry ledger, realtime rider/driver/admin sockets, JWT + phone-OTP, idempotency & audit log · ~300 endpoints over 47 controllers, 2,800+ tests, Swagger docs.

Admin Console

// Next.js 14 · Jun '26 → now

Bespoke 30-screen ops surface – Live MapLibre trips map, dispatch/SOS live boards, KYC onboarding review, finance reconciliation, refunds/payouts, cash control, map zone editor, feature flags, audit log, Google SSO.

iOS Apps · Rider & Driver

// SwiftUI · Jul '26 → now

Two native SwiftUI apps on a shared BuraqCore Swift package (domain · networking · design system, pinned remotely) – live GPS trip lifecycle, Socket.IO feeds with fresh-token reconnect, in-app chat, payments, Live Activities, driver earnings & turn-by-turn navigation · ~150 SwiftUI views, 430+ tests.

Android App · Driver

// Kotlin · Jetpack Compose · Sep '26 → now

Native Kotlin / Compose port of the driver app against the same API contract – modularised (core · networking · design system · domain) with the design-system and CI bar in place; product features porting now.

One backend · one contract · three clients in flight – plus growth loops (promotions, referrals, loyalty, wallet), driver safety/SOS, and scheduled reconciliation jobs, owned end-to-end.
