Senior iOS Tech Lead with **12+ years** architecting and shipping **SwiftUI** apps used by millions across the MENA region. I lead iOS teams and set technical direction — with proven architectural range: recently I built a production-grade ride-hailing platform **solo, end-to-end** (native iOS & Android clients, a hardened NestJS / PostgreSQL / Redis backend, and a Next.js ops console).

CURRENT
INDEPENDENT

Full-Stack Platform Architect — iOS · Android · Backend · Web
Ride-Hailing Platform · Independent Project

Architected and have been building a production ride-hailing platform **solo** — a hardened backend and a real-time ops console **in production**, with two native **iOS/SwiftUI** apps (Rider & Driver) and the Android driver app in active development — **owning every layer** from data model to release, and setting the engineering standards: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite.

Backend APIs
NestJS · TypeScript · Mar '26 → now

Modular monolith, **22 domains** — **trip state machine**, **scored dispatch** over a Redis geo index, **double-entry ledger**, realtime rider/driver/admin **sockets**, JWT + phone-OTP, idempotency & audit log · ~300 endpoints over 47 controllers, **2,800+ tests**, Swagger docs.

Admin Console
Next.js 14 · Jun '26 → now

Bespoke **30-screen** ops surface — live **MapLibre** trips map, dispatch/SOS live boards, KYC onboarding review, finance reconciliation, refunds/payouts, cash control, map **zone editor**, feature flags, audit log, **Google SSO**.

iOS Apps · Rider & Driver
SwiftUI · Jul '26 → now

Two native **SwiftUI** apps on a shared **BuraqCore** Swift package (domain · networking · design system, pinned remotely) — live GPS **trip lifecycle**, Socket.IO feeds with fresh-token reconnect, in-app chat, payments, Live Activities, driver earnings & turn-by-turn navigation · ~150 SwiftUI views, **430+ tests**.

Android App · Driver
Kotlin · Jetpack Compose · Sep '26 → now

Native **Kotlin / Compose** port of the driver app against **the same API contract** — modularised (core · networking · design system · domain) with the design-system and CI bar in place; product features porting now.

One backend · one contract · three clients in flight — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs, owned end-to-end.
