CURRENT

INDEPENDENT

Full-Stack Platform Architect — iOS · Android · Backend · Web

Ride-Hailing Platform · Independent Project

Founded, architected, and have been building a production ride-hailing platform **solo** — a hardened backend and a real-time operations console **in production**, plus three native clients across **iOS & Android** in active development — **owning every layer** and setting the engineering standards: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite.

Backend APIs NestJS · TypeScript · Mar '26 → now	Modular monolith, 22 domains — trip state machine, scored dispatch over a Redis geo index, double-entry ledger, realtime rider/driver/admin sockets, JWT + phone-OTP, idempotency & audit log · ~300 endpoints over 47 controllers, 2,800+ tests, Swagger docs.
Admin Console Next.js 14 · Jun '26 → now	Bespoke 30-screen ops surface — live MapLibre trips map, dispatch/SOS live boards, KYC onboarding review, finance reconciliation, refunds/payouts, cash control, map zone editor, feature flags, audit log, Google SSO.
iOS Apps · Rider & Driver SwiftUI · Jul '26 → now	Two native SwiftUI apps on a shared BuraqCore Swift package (domain · networking · design system, pinned remotely) — live GPS trip lifecycle, Socket.IO feeds with fresh-token reconnect, in-app chat, payments, Live Activities, driver earnings & turn-by-turn navigation · ~150 SwiftUI views, 430+ tests.
Android App · Driver Kotlin · Jetpack Compose · Sep '26 → now	Native Kotlin / Compose port of the driver app against the same API contract — modularised (core · networking · design system · domain) with the design-system and CI bar in place; product features porting now.
One backend · one contract · three clients in flight — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs, owned end-to-end.
