A technologist who has owned every layer of the job. **12+ years** building and **8+ leading** — seven of them running the iOS organisation behind a POS platform trusted by **20k+ restaurants and cafés**. I set technology strategy, own architecture and the roadmap, build the standards an engineering team runs on, and answer for delivery. And I have carried the **whole technical scope of a founding CTO alone**: a production ride-hailing platform I am architecting and building solo — native iOS & Android clients, a hardened NestJS / PostgreSQL / Redis backend, and a Next.js operations console — so no layer of the stack is a black box to me when I am deciding for a company.

## § 01 The Technology Office

|                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>01 — TECHNOLOGY STRATEGY</b><br><b>Choose the bets, own the consequences</b><br>Stack, architecture, and roadmap as a single decision: platform choices, module boundaries, data models, security posture — and the <b>migration plans that keep a codebase current without stalling the business</b> . At Marn that meant moving a seven-year-old production POS to SwiftUI, Combine and async/await while features kept shipping. | <b>02 — ORGANISATION &amp; TALENT</b><br><b>An engineering function, not a headcount</b><br>Seven years building and leading a <b>5+ engineer team</b> — onboarding, mentoring, career conversations, and a review culture where quality is the default rather than a phase. The standards I set held the product at a <b>99.8-99.9% crash-free rate</b> under real enterprise load.                                   |
| <b>03 — DELIVERY &amp; OPERATIONS</b><br><b>Commitments the company can plan around</b><br>CI/CD and release automation built from nothing ( <b>60% faster deployments</b> ), test suites that gate merges, explicit performance and crash budgets ( <b>40% faster load times</b> ), and planning with product and design in commitments the team can actually keep.                                                                   | <b>04 — WHOLE-STACK OWNERSHIP</b><br><b>No layer is someone else's problem</b><br>iOS & Android clients, NestJS/PostgreSQL/Redis backends, Next.js operations consoles. I am building and running <b>all four layers of a production platform solo</b> — trip state machine, scored dispatch, double-entry ledger, realtime sockets, 2,800+ tests — so I can cost a technical decision before the company pays for it. |

## § 02 Professional Experience

|                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| One backend · one contract · three clients in flight — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs. The exercise a technical leader needs periodically: own every trade-off yourself, then know exactly what you are asking of a team. |                                                                                                                                                                                                                                                                                                                                           |

|                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## § 07 Honours

|           |                                                                                                                                                                                                                                              |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>01</b> | Led an iOS engineering team for <b>7 consecutive years</b> on a POS platform serving <b>20k+ restaurants and cafés</b> — through the product's growth from launch scale to enterprise.                                                       |
| <b>02</b> | Held a <b>99.8-99.9% crash-free rate</b> and cut deployment time <b>60%</b> by building the standards, tests and CI/CD the team ran on.                                                                                                      |
| <b>03</b> | Architecting a <b>full-stack ride-hailing platform solo</b> — NestJS/PostgreSQL backend and Next.js ops console in production, three native clients (two iOS, one Android) in development, with idempotent APIs and double-entry accounting. |
| <b>04</b> | Built a food-delivery platform serving <b>20M+ users</b> across Saudi Arabia and Bahrain, and a ride-hailing ecosystem serving <b>15M+ users</b> in Saudi Arabia.                                                                            |
| <b>05</b> | <b>10+ apps</b> published on the App Store, used by millions across MENA.                                                                                                                                                                    |
| <b>06</b> | <b>30+ projects</b> delivered across a 12-year career.                                                                                                                                                                                       |
| <b>07</b> | Early Swift adopter (WWDC 2014) and early SwiftUI adopter (WWDC 2019) — a habit of betting on the right platform shift early.                                                                                                                |
