Technical lead with **12+ years** hands-on and **8+ leading** — the engineer a team's hardest problems land on. For seven years I owned the architecture of an enterprise POS used by 20k+ restaurants and cafés: an offline-first CoreData core with cloud sync, the module boundaries, the review bar, and the multi-year SwiftUI migration that kept it modern without pausing delivery. I lead by building — right now a production ride-hailing platform I am architecting and building **solo** across native iOS & Android, a NestJS / PostgreSQL / Redis backend, and a Next.js operations console.

12+ YEARS HANDS-ON	8+ YEARS LEADING ENGINEERING TEAMS	35M+ USERS REACHED ACROSS SHIPPED APPS	30+ PROJECTS DELIVERED
--	--	--	--

§ 01 How I Lead Technically

01 — ARCHITECTURE & DIRECTION Own the shape of the system Module boundaries, data models, and the offline-first CoreData + cloud-sync core of an enterprise POS — built so a venue keeps trading when the network does not. Plus the migration plans that keep a codebase current without stalling delivery.	02 — STANDARDS IN CODE The bar is a diff, not a document Review culture, automated tests that gate merges, and CI/CD built from nothing (60% faster deployments). The standards I wrote and enforced held the app at a 99.8-99.9% crash-free rate in production.
--	---

03 — MENTORING AT THE KEYBOARD Lead by building alongside Seven years mentoring a 5+ engineer team through pairing, design review, and the kind of feedback that makes the next PR better. Technical direction lands faster when the lead is in the codebase too.	04 — WHOLE-STACK DEPTH Credible at every layer iOS & Android clients, NestJS/PostgreSQL/Redis backends, Next.js consoles — I am building and running all four layers of a production platform solo: trip state machine, scored dispatch over a Redis geo index, double-entry ledger, realtime sockets, 2,800+ tests.
---	---

§ 02 Professional Experience

Aug 2019 — Aug 2026	iOS Team Lead — 7 years leading the iOS org
---------------------	--

RIYADH, KSA

Marn — Jahez Group ↗

— Led a **5+ engineer iOS team** for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by 20k+ restaurants and cafés.

— Owned the **technical roadmap and architecture**: an offline-first CoreData core with cloud sync, built so a venue keeps trading when the network does not.

— **Set the engineering standards** — module boundaries, code review, automated testing — that held the app at a 99.8-99.9% crash-free rate in production.

— **Drove the multi-year migration** to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to product leadership.

— **Built CI/CD and the release process from scratch**, cutting deployment time 60% and shortening every engineer's feedback loop.

— Ran the performance programme (40% faster load times) and designed the table-management, order-processing and inventory systems at the heart of the product.

— Partnered with product, design and backend leadership on scope, estimates and delivery commitments the team could keep.

Mar 2026 — Present	Founding Platform Architect — iOS · Android · Backend · Web
--------------------	--

CURRENT

INDEPENDENT

Ride-Hailing Platform · Independent Project

Took the **full technical scope of a founding CTO** and carried it alone: chose the stack, set the standards, and have been building a production ride-hailing platform — a hardened backend and a real-time ops console **in production**, with two native **iOS/SwiftUI** apps (Rider & Driver) and the Android driver app in active development. Every layer from data model to release, governed by explicit rules: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite that gates the merge.

Backend APIs

NestJS · TypeScript · Mar '26 → now

Modular monolith, **22 domains** — **trip state machine**, scored dispatch over a Redis geo index, **double-entry ledger**, realtime rider/driver/admin **sockets**, JWT + phone-OTP, idempotency & audit log · ~300 endpoints over 47 controllers, **2,800+ tests**, Swagger docs.

Admin Console

Next.js 14 · Jun '26 → now

Bespoke **30-screen** ops surface — live **MapLibre** trips map, dispatch/SOS live boards, KYC onboarding review, finance reconciliation, refunds/payouts, cash control, map **zone editor**, feature flags, audit log, **Google SSO**.

iOS Apps · Rider & Driver

SwiftUI · Jul '26 → now

Two native **SwiftUI** apps on a shared **BuraqCore** Swift package (domain · networking · design system, pinned remotely) — live **GPS trip lifecycle**, Socket.IO feeds with fresh-token reconnect, in-app chat, payments, Live Activities, driver earnings & turn-by-turn navigation · ~150 SwiftUI views, **430+ tests**.

Android App · Driver

Kotlin · Jetpack Compose · Sep '26 → now

Native **Kotlin / Compose** port of the driver app against **the same API contract** — modularised (core · networking · design system · domain) with the design-system and CI bar in place; product features porting now.

One backend · one contract · three clients in flight — plus growth loops (promotions, referrals, loyalty tiers, wallet), and scheduled reconciliation jobs. The exercise a technical leader needs periodically: own every trade-off yourself, then know exactly what you are asking of a team.

Dec 2025 — Jun 2026	Senior iOS Engineer
---------------------	----------------------------

VOLUNTEER

HaramBlur ↗ · Voluntary Charity Project

— Designed an architecture integrating on-device machine learning for real-time content analysis.

— Built a seamless communication layer between native iOS and web-based content.

— Implemented efficient image processing with region-based and full-image blur effects.

— Created a real-time video monitoring system for continuous content filtering.

— Developed smart banner blocking and optimised memory management throughout.

Mar 2018 — May 2019	iOS Team Lead
---------------------	----------------------

RIYADH, KSA

Ego — The Ride Hailing App ↗

— Led iOS delivery for a complete ride-hailing ecosystem (rider, driver, watchOS) serving 15M+ users in Saudi Arabia.

— Implemented real-time GPS tracking and navigation with MapKit and optimised route algorithms.

— Integrated Apple Pay, HyperPay, and push-notification infrastructure.

— Created seamless iPhone — Apple Watch handoff for continuous ride tracking.

— Built the driver rating system and real-time fare calculation engine.

Sep 2016 — Mar 2018	Senior iOS Engineer
---------------------	----------------------------

KSA

HungerStation — DeliveryHero Group ↗

— Contributed to a major food-delivery platform serving 20M+ users.

— Optimised app performance for high-volume transaction processing.

— Implemented real-time order tracking and delivery optimisation.

— Collaborated with backend teams on API design and integration.

May 2016 — Aug 2016	iOS Developer
---------------------	----------------------

ALNapedh ↗

— Developed food-ordering apps with Firebase integration and real-time features.

— Implemented Speedy payments and live-chat functionality.

— Built responsive UI with Auto Layout across multiple device sizes.

Jul 2015 — Sep 2015	iOS & Apple Watch Developer
---------------------	--

Nile Design Co. ↗

— Early adopter of Apple Watch development (watchOS 1–2).

— Built a foundation in iOS and watchOS app development.

— Adopted SwiftUI from WWDC 2019 onward.

May 2014 — May 2015	iOS Developer
---------------------	----------------------

UK Pro. Solutions Ltd. ↗

— Foundation iOS experience in Objective-C and early Swift.

— Built social networks and e-commerce platforms.

— Learned core iOS principles and App Store deployment.

§ 03 Selected Projects

01 — FULL-STACK Ride-Hailing Platform (built from scratch · since Mar 2026) SwiftUI · Kotlin · Jetpack Compose · NestJS · TypeScript · PostgreSQL · Redis · Socket.IO · Next.js End-to-end ride-hailing platform architected solo: a hardened NestJS backend (trip state machine, scored dispatch, double-entry ledger, realtime sockets, 2,800+ tests) and a real-time Next.js operations console in production, with three native clients (Rider & Driver on iOS/SwiftUI, Driver on Android/Kotlin-Compose) in active development. Four Platforms · Solo Ownership · Production Security	02 — ENTERPRISE Marn — iPad POS SwiftUI · CoreData · CloudKit · Real-time Sync Enterprise point-of-sale serving 20k+ restaurants and cafés across Saudi Arabia. Offline-first architecture, complex table management, real-time order processing — the product my iOS team owned for seven years. 4.8 / 5 — 2,437 ratings
---	---

03 — MOBILITY Ego — Ride Hailing MapKit · Core Location · Apple Pay · Push · watchOS Complete ride-hailing ecosystem: rider app, driver app, and Apple Watch companion. Real-time GPS, Apple Pay, and cross-device experiences for 15M+ users. 4.7 / 5 — 211.8k+ ratings	04 — DELIVERY HungerStation UIKit · Firebase · Real-time APIs · Perf Optimization Major food-delivery platform serving 20M+ users across Saudi Arabia and Bahrain. Focused on performance and real-time order tracking. 4.5 / 5 — 1.9M+ ratings
---	--

05 — AI / PRIVACY HaramBlur — Privacy Browser SwiftUI · CoreML · WKWebView · CoreImage · Vision Privacy-focused iOS browser with real-time, AI-powered content detection and filtering. On-device ML, smart blur effects, and live video monitoring. AI-Powered Privacy Browser	06 — COMMUNITY Daleelo MapKit · Core Location · Social SDKs · Community Muslim community app for users across the US — prayer times, mosque finder, and community features with enhanced location and social integration. 4.5 / 5 — 1,287 ratings
--	--
