Jan 2025 — Jun 2026
Full-Stack Platform Architect — iOS · Android · Backend · Web
Ride-Hailing Platform · Independent Project

Founded, architected, and led a production ride-hailing platform **solo** — native **iOS/SwiftUI** Rider & Driver apps plus Android, a hardened backend, and an ops console — **owning delivery across every layer**, and setting the engineering standards: idempotent mutations, double-entry accounting, acyclic module boundaries, and a CI test suite.

Backend APIs
NestJS · TypeScript · Jan '25 → Jun '26

Modular monolith, ~17 domains — **trip state machine**, **scored dispatch** over a Redis geo index, **double-entry ledger**, realtime rider/driver/admin **sockets**, JWT + phone-OTP, idempotency & audit log · **1,150+ tests**, Swagger docs.

iOS Apps · Rider & Driver
SwiftUI · Mar '25 → Jun '26

Two native **SwiftUI** apps — live GPS **trip lifecycle**, realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.

Admin Console
Next.js 14 · Mar '25 → Jun '26

Bespoke **19-screen** ops surface — live **MapLibre** trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map **zone editor**, **Google SSO**.

Android Apps · Rider & Driver
Kotlin · Jetpack Compose · Aug '25 → Jun '26

Native **Kotlin / Compose** parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across **one shared API contract**.

One backend · one contract · four clients — plus growth loops (promotions, referrals, loyalty tiers, wallet), driver safety/SOS, and scheduled reconciliation jobs, shipped end-to-end.
