4 pillars

[01] people & growth

Grow engineers, not just features

Seven years with one team — onboarding, mentoring, career conversations, and pairing on the problems that actually teach.

◆ Retention through a seven-year product

[02] delivery & predictability

Estimates the team can keep

CI/CD built from nothing, suites that gate merges, and planning with product and design in commitments nobody walks back.

◆ 60% faster deployments

[03] quality & standards

Quality is a default, not a phase

Module boundaries, review culture and automated testing on an enterprise POS in daily production use.

◆ 99.8-99.9% crash-free · 40% faster load

[04] technical credibility

I can still review any PR on my team

Drove the multi-year SwiftUI migration, and shipped a full ride-hailing platform **solo** across iOS, Android, backend and web.

iOS Team Lead @ Marn — Jahez Group

Aug 2019 → Aug 2026 **MOST RECENT**

RIYADH, KSA

+ **Led a 5+ engineer iOS team** for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by **20k+ restaurants** and cafés.
+ **Owned the technical roadmap and architecture:** an offline-first CoreData core with cloud sync, built so a venue keeps trading when the network does not.
+ **Set the engineering standards** — module boundaries, code review, automated testing — holding the app at a **99.8-99.9% crash-free** rate in production.
+ **Drove the multi-year migration** to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to product leadership.
+ **Built CI/CD and the release process from scratch**, cutting deployment time **60%** and shortening every engineer's feedback loop.
+ Ran the performance programme (**40% faster load times**) and designed the table-management, order-processing and inventory systems at the product's core.
+ Partnered with product, design and backend leadership on scope, estimates and delivery commitments.

Founding Platform Architect — iOS · Android · Backend · Web @ Ride-Hailing Platform · Independent

Dec 2025 → Jul 2026

Took the **full technical scope of a founding CTO** and carried it alone — shipped a production ride-hailing platform **solo**: two native **iOS/SwiftUI** apps (Rider & Driver) plus their Android counterparts, a hardened backend, and a real-time ops console — **owning every layer** and setting the engineering standards (idempotency, double-entry accounting, acyclic module boundaries, CI test suite).

› **Backend APIs**
// NestJS · TypeScript · Dec '25 → Jul '26

Modular monolith, ~17 domains — **trip state machine**, **scored dispatch** over a Redis geo index, **double-entry ledger**, realtime rider/driver/admin **sockets**, JWT + phone-OTP, idempotency & audit log · **1,150+ tests**, Swagger docs.

› **iOS Apps · Rider & Driver**
// SwiftUI · Jan '26 → Jul '26

Two native **SwiftUI** apps — live GPS **trip lifecycle**, realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.

› **Admin Console**
// Next.js 14 · Feb '26 → Jul '26

Bespoke **19-screen** ops surface — live **MapLibre** trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map **zone editor**, **Google SSO**.

› **Android Apps · Rider & Driver**
// Kotlin · Jetpack Compose · Mar '26 → Jul '26

Native **Kotlin / Compose** parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across **one shared API contract**.

One backend · one contract · four clients — plus growth loops (promotions, referrals, loyalty, wallet), driver safety/SOS, and scheduled reconciliation jobs, shipped end-to-end.
