[01] architecture & direction

Own the shape of the system

Module boundaries, data models, and the offline-first CoreData + cloud-sync core of an enterprise POS — built so a venue keeps trading when the network does not.

◆ Offline-first · 7 years in production

[02] standards in code

The bar is a diff, not a document

Review culture, automated tests that gate merges, and CI/CD built from nothing.

◆ 99.8-99.9% crash-free · 60% faster deploys

[03] mentoring at the keyboard

Lead by building alongside

Seven years mentoring a 5+ engineer team through pairing, design review, and feedback that makes the next PR better.

◆ 5+ engineers · 7 years

[04] whole-stack depth

Credible at every layer

iOS & Android clients, NestJS/PostgreSQL/Redis backends, Next.js consoles — all four layers of a production platform, built solo.

◆ 1,150+ tests · 4 platforms

iOS Team Lead @ Marn — Jahez Group

AUG 2019 → AUG 2026 · MOST RECENT

RIYADH, KSA

- + Led a 5+ engineer iOS team for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by 20k+ restaurants and cafés.
- + Owned the technical roadmap and architecture: an offline-first CoreData core with cloud sync, built so a venue keeps trading when the network does not.
- + Set the engineering standards — module boundaries, code review, automated testing — holding the app at a 99.8-99.9% crash-free rate in production.
- + Drove the multi-year migration to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to product leadership.
- + Built CI/CD and the release process from scratch, cutting deployment time 60% and shortening every engineer's feedback loop.
- + Ran the performance programme (40% faster load times) and designed the table-management, order-processing and inventory systems at the product's core.
- + Partnered with product, design and backend leadership on scope, estimates and delivery commitments.

Founding Platform Architect — iOS · Android · Backend · Web @

Ride-Hailing Platform · Independent

DEC 2025 → JUL 2026

Took the full technical scope of a founding CTO and carried it alone — shipped a production ride-hailing platform solo: two native iOS/SwiftUI apps (Rider & Driver) plus their Android counterparts, a hardened backend, and a real-time ops console — owning every layer and setting the engineering standards (idempotency, double-entry accounting, acyclic module boundaries, CI test suite).

> Backend APIs

// NestJS · TypeScript · Dec '25 → Jul '26

Modular monolith, ~17 domains — trip state machine, scored dispatch over a Redis geo index, double-entry ledger, realtime rider/driver/admin sockets, JWT + phone-OTP, idempotency & audit log · 1,150+ tests, Swagger docs.

> iOS Apps · Rider & Driver

// SwiftUI · Jan '26 → Jul '26

Two native SwiftUI apps — live GPS trip lifecycle, realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.

> Admin Console

// Next.js 14 · Feb '26 → Jul '26

Bespoke 19-screen ops surface — live MapLibre trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map zone editor, Google SSO.

> Android Apps · Rider & Driver

// Kotlin · Jetpack Compose · Mar '26 → Jul '26

Native Kotlin / Compose parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across one shared API contract.

One backend · one contract · four clients — plus growth loops (promotions, referrals, loyalty, wallet), driver safety/SOS, and scheduled reconciliation jobs, shipped end-to-end.
