Full-Stack Platform Architect – iOS · Android · Backend · Web @ Ride-Hailing Platform · Independent

Dec 2025 → Jul 2026

Founded, architected, and shipped a production ride-hailing platform solo – four native apps across iOS & Android, a hardened backend, and a real-time ops console – owning every layer and setting the engineering standards (idempotency, double-entry accounting, acyclic module boundaries, CI test suite).

> Backend APIs

// NestJS · TypeScript · Dec '25 → Jul '26

Modular monolith, ~17 domains – trip state machine, scored dispatch over a Redis geo index, double-entry ledger, realtime rider/driver/admin sockets, JWT + phone-OTP, idempotency & audit log · 1,150+ tests, Swagger docs.

> iOS Apps · Rider & Driver

// SwiftUI · Jan '26 → Jul '26

Two native SwiftUI apps – live GPS trip lifecycle, realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.

> Admin Console

// Next.js 14 · Feb '26 → Jul '26

Bespoke 19-screen ops surface – live MapLibre trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map zone editor, Google SSO.

> Android Apps · Rider & Driver

// Kotlin · Jetpack Compose · Mar '26 → Jul '26

Native Kotlin / Compose parity for both apps – same trip lifecycle, realtime tracking, chat, and payments across one shared API contract.

One backend · one contract · four clients – plus growth loops (promotions, referrals, loyalty, wallet), driver safety/SOS, and scheduled reconciliation jobs, shipped end-to-end.
