4 pillars

[01] architecture & direction

Own the shape of the system

Module boundaries, data models, and the offline-first CoreData + cloud-sync core of an enterprise POS — built so a venue keeps trading when the network does not.

◆ Offline-first · 7 years in production

[02] standards in code

The bar is a diff, not a document

Review culture, automated tests that gate merges, and CI/CD built from nothing.

◆ 99.8–99.9% crash-free · 60% faster deploys

[03] mentoring at the keyboard

Lead by building alongside

Seven years mentoring a **5+ engineer team** through pairing, design review, and feedback that makes the next PR better.

◆ 5+ engineers · 7 years

[04] whole-stack depth

Credible at every layer

iOS & Android clients, NestJS/PostgreSQL/Redis backends, Next.js consoles — **all four layers of a production platform, built solo.**

◆ 1,150+ tests · 4 platforms

8 roles

iOS Team Lead @ Marn — Jahez Group

RIYADH, KSA

Aug 2019 → Aug 2026

- **Led a 5+ engineer iOS team** for seven years — onboarding, mentoring, career growth, and the review culture behind an enterprise POS used by **20k+ restaurants** and cafés.
- **Owned the technical roadmap and architecture:** an offline-first CoreData core with cloud sync, built so a venue keeps trading when the network does not.
- **Set the engineering standards** — module boundaries, code review, automated testing — holding the app at a **99.8–99.9% crash-free** rate in production.
- **Drove the multi-year migration** to SwiftUI, Combine and async/await without pausing feature delivery, and made the case for it to product leadership.
- **Built CI/CD and the release process from scratch**, cutting deployment time **60%** and shortening every engineer's feedback loop.
- Ran the performance programme (**40% faster load times**) and designed the table-management, order-processing and inventory systems at the product's core.
- Partnered with product, design and backend leadership on scope, estimates and delivery commitments.

Founding Platform Architect — iOS · Android · Backend · Web @ Ride-Hailing Platform · Independent

Mar 2026 → Present CURRENT

Took the **full technical scope** of a **founding CTO** and carried it alone — building a production ride-hailing platform **solo**: a hardened backend and a real-time ops console **in production**, with two native **iOS/SwiftUI** apps (Rider & Driver) and their Android counterparts in active development — **owning every layer** and setting the **engineering standards** (idempotency, double-entry accounting, acyclic module boundaries, CI test suite).

› Backend APIs
// NestJS · TypeScript · Mar '26 → now

Modular monolith, ~17 domains — **trip state machine**, **scored dispatch** over a Redis geo index, **double-entry ledger**, realtime rider/driver/admin **sockets**, JWT + phone-OTP, idempotency & audit log · **1,150+ tests**, Swagger docs.

› Admin Console
// Next.js 14 · Jun '26 → now

Bespoke **19-screen** ops surface — live **MapLibre** trips map, dispatch/SOS live boards, KYC review, finance reconciliation, refunds/payouts, map **zone editor**, **Google SSO**.

› iOS Apps · Rider & Driver
// SwiftUI · Jul '26 → now

Two native **SwiftUI** apps — live GPS **trip lifecycle**, realtime sockets, in-app chat, payments, and driver earnings & turn-by-turn navigation.

› Android Apps · Rider & Driver
// Kotlin · Jetpack Compose · Sep '26 → now

Native **Kotlin / Compose** parity for both apps — same trip lifecycle, realtime tracking, chat, and payments across **one shared API contract**.

One backend · one contract · four clients in flight — plus growth loops (promotions, referrals, loyalty, wallet), driver safety/SOS, and scheduled reconciliation jobs, owned end-to-end.
